

AGROSOL liquid

PLANT AID // individually licensed according to § 9a DMG 1994 (Austria)

How does AGROSOL liquid work

Through the intake of AGROSOL particles the photosynthesis will be stimulated. The intake of nutrients and of the production of protein and glucose increases within the plant.

Advantages

- Applicable for all cultures
- High plant availability through a very efficient uptake of micro-particles
- Promotes fine root formation
- Better resilience of the cultures in stress situations.
- Increases the uptake of essential plant nutrients
- Increases yield and quality
- Patented technology (Wirkungssicherheit)

LISTED IN THE RESOURCE LIST
FOR ORGANIC FARMING

MISCIBILITY:

Can be mixed with commercially available leaf fertilizers and plant protectants. Although not all cases are from the praxis foreseeable, a mixing trial with small quantities of the products to be sprayed is advisable in each and any case.

pH value: 8,3

density: 1,4

AVAILABLE TRADING UNITS:

10 litre canister,

1000 litre IBC container

Foliar application

Ingredient/Benefit

- **Mineral mixture of natural carbonates**
 - Stimulation of CO₂ uptake
- **Auxin**
 - Multiple effects on growth and development processes
 - Promotes cellular elongation
- **Cytokinins**
 - Stimulate cell division
 - Stimulate root growth
- **Amino acids**
 - Adhesive function
 - Improved nitrogen availability
